

DATA FOR PROGRESS

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

Covid-19, also known as the coronavirus, is a new respiratory disease caused by a novel virus that appears to have entered the human population from animals in Wuhan, China late last year. While in most cases Covid-19 symptoms are mild and flu-like, in a minority of patients, particularly the elderly or those with poor respiratory health, it causes serious pneumonia and kills ten times as many patients as the flu. Since coronavirus is new to humans, no one has acquired immunity and there is no vaccine. Without preventative measures it will infect a very large share of the population and overwhelm the health system's ability to provide care to those in need of hospitalization. Lawmakers in Congress are discussing various ways that they can respond to the current coronavirus outbreak. For each of the following actions they are considering, please indicate your level of support. Should the federal government ...? -- Provide 14 days of paid sick leave and up to three months of paid family and medical leave for all workers.

Covid-19, also known as the coronavirus, is a new respiratory disease caused by a novel virus that appears to have entered the human population from animals in Wuhan, China late last year. While in most cases Covid-19 symptoms are mild and flu-like, in a minority of patients, particularly the elderly or those with poor respiratory health, it causes serious pneumonia and kills ten times as many patients as the flu. Since coronavirus is new to humans, no one has acquired immunity and there is no vaccine. Without preventative measures it will infect a very large share of the population and overwhelm the health system's ability to provide care to those in need of hospitalization. Lawmakers in Congress are discussing various ways that they can respond to the current coronavirus outbreak. For each of the following actions they are considering, please indicate your level of support. Should the federal government ...? -- Provide free access to full coronavirus testing, care, medication and vaccination for every American.
