

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

Some Democrats have proposed a trillion-dollar investment to grow existing programs in the Department of Energy for funding for advanced green technologies? Democrats believe that massive public investment will grow the 21st century green economy and ensure that new technologies are affordable to everyone. Republicans believe the government should let businesses choose what to invest in, and that public funding doesn't work. Do you support or oppose this policy?

Many developing countries cannot afford the most modern clean technologies of the green economy. Some Democrats have proposed that the US share cutting-edge green technologies at low or no cost with the low-income countries most impacted by climate change. Democrats believe that sharing the best technologies to poor countries at low cost is morally just, and also the best strategy to ensure that all countries reduce carbon pollution as quickly as possible. Republicans believe that American companies should maximize profits from selling their technology. Do you support or oppose this policy?

Spending years in masters and PhD programs is expensive, so many low-income people and people of color do not pursue graduate degrees in science and technology, limiting their ability to contribute to green innovation. Democrats have proposed federal scholarships to fully fund all qualifying students for a graduate degree in clean energy and other low-carbon sectors. Democrats believe that people from any racial background or social class with the talent and motivation to help transform the economy should have the chance to do so, without risking crippling debts. Republicans believe that guaranteeing scholarship funds is a waste of taxpayer money and the most talented students will eventually pay off debts thanks to high-paying jobs. Do you support or oppose this policy?

The renewable energy industry has been criticized for encouraging low wages and pollution in developing countries where there is mining and manufacturing for green technology. Some Democrats have proposed that US trade agreements should require strong labor rights, consultation with indigenous communities, and environmental sustainability at each stage of economic production. Democrats believe that everyone has the right to a dignified job and clean air and water--no matter what country they live in. Republicans believe that free trade and deregulation results in the lowest prices for consumer goods and boosts economic growth. Do you support or oppose this policy?
