

# DATA FOR PROGRESS

From September 6 to 11, 2024, Data for Progress conducted a survey of 1,225 U.S. likely voters nationally using web panel respondents. The sample was weighted to be representative of likely voters by age, gender, education, race, geography, and 2020 recalled vote. The survey was conducted in English. The margin of error associated with the sample size is  $\pm 3$  percentage points. Results for subgroups of the sample are subject to increased margins of error. Partisanship reflected in tabulations is based on self-identified party affiliation, not partisan registration. For more information please visit [dataforprogress.org/our-methodology](https://dataforprogress.org/our-methodology).

NB: subgroups with a n-size less than 50 (<50) are not shown on these cross-tabs. We choose not to display N<50 subgroups because the sample is too small to have statistical significance. We did, however, take samples of these subgroups for representational and weighting purposes to accurately reflect the electorate makeup. Some values may not add up to 100 due to rounding.

N=1,225 unless otherwise specified.

**[2]** Currently, people who hold assets like stock, fine art, and real estate only have to pay a tax on the income they have made from those assets when they are sold.

Some officials are proposing that households worth over \$100 million pay a minimum 25% tax on all of their income. This would **include** any gains made on investments like stock, fine art, and real estate, even if those assets aren't sold.

Do you support or oppose this proposal?
